

A close-up, low-angle shot of a window frame. The frame is white and appears to be made of a composite material. The interior of the window is dark, possibly black or dark grey. A small, circular screw or fastener is visible on the dark interior panel. The background is a bright, out-of-focus outdoor scene with a light-colored wall and some greenery.

Cleaning and care

cero

In order to keep your cero product fully functional at all times and maintain the validity of the warranty, there are a few points you should observe. We have listed these for you below.

1 | Operating the system in accordance with your briefing and the operating instructions.

2 | Clean the bottom running and guide rails regularly to remove any debris.

3 | Any foreign bodies that obstruct water drainage in the floor track must be removed immediately in order to prevent damage. The same applies during the winter months:

Ice and snow can also prevent water drainage, and must be removed from inside and in front of the floor track.

General notes

The battery on the control unit must be replaced at least every 2 years. We also recommend signing a separate maintenance agreement so that your system can be inspected regularly by a specialist. The maintenance intervals contained therein must always be observed in order to maintain the product's long service life.
